USEFUL APPLICATIONS

• Shoemaking Machineries
• Glueing and binding machines (hot glue)
• Packaging and blister packing machines
• Paint booths
• T-shirt printing
• Climatic chambers and incubators
• Hot runner
• Glass bending ovens
• Extruders
• Industrial baking or large kitchens
• Continuous multi-zone ovens (for PCB, for leather goods, etc.)
• Ceramics ovens
• Heat-treatment ovens
• Ovens for goldsmiths and dentists
• Simple cascade controls
• Chillers

K SERIES

CONTROLLERS / MINI-PROGRAMMERS
WITH WATTMETER FUNCTION AND INDEPENDENT TIMER

• Input for TC, RTD, PTC, NTC, mA or V
• User Calibration
• H/C PID Control with overshoot control, self-tune and 2 Autotuning algorithms
• 8 Segment Programmer function with segment recovery, 2 events and stasis control (guaranteed soak)
• Independent timer with 4 functioning modes
• H/C On/OFF Control with compressor protection time
• Wattmeter for calculating the instantaneous power and energy used
• Digital Retransmission of the set point
• Counter for days and hours worked with programmable threshold for preventative maintenance
• Delay at the start up function
• Parameter sequence freely programmable
• Ramp to set point change
• RS485 Serial Communication with Modbus RTU protocol
• Soft start
TWO AUTOTUNING ALGORITHMS

In order to meet the clients’ needs and those of their production processes, ASCON TECNOLOGIC have developed two autotuning algorithms (as well as adaptive self-tuning):
Oscillatory autotuning and the “fast” type.

- **Oscillatory autotuning** is the classic type that requires 3 oscillations to be made around a set point. This type of tuning is particularly accurate and can be set up at any moment. However, it takes a long time and generates an overshoot that, although not exaggerated, may not be appreciated.

- **Fast autotuning**, on the other hand is much faster and therefore particularly suitable for very slow processes. Another of its characteristics is that it does not generate overshoot (the algorithm aims at keeping the PV under the set point). Finally fast autotuning, applied in multi-loop systems, feels the "dragging" effects produced by neighbouring loops much less and is therefore particularly suitable for machines such as extruders, hot-runners, continuous ovens, etc.

**USER CALIBRATION**

This function allows the manufacturer of the machine to calibrate the entire measuring chain thus compensating for all errors due to:
- sensor position
- class of sensor
- accuracy of the instrument.

The user calibration does NOT modify the plant calibration and can always be cancelled.

**DIGITAL RETRANSMISSION**

By making use of serial communication and without using a PC, it is possible for an instrument (Master) to send its operative set points to other instruments (Slave).
Furthermore, each slave instrument can add one of its offsets to the value received.
It is therefore possible to modify the set point of all the connected instruments by modifying the set point of the master only.
Typical applications include continuous ovens, hot-runners, polymerization ovens, etc.

**PROGRAMMER FUNCTION**

**APPLIED EXAMPLE:**
Paint booth and drying chamber for spray paints (spray booths for bodywork).
- During the painting phase, the temperature inside the booth must remain at 20°C and the air used for its ventilation must come from outside.
- Once the painting is finished, the operator leaves the booth, closes the door and starts up the "drying" cycle.
During this phase the instrument closes the air gate and recycles the air inside the booth by means of which energy consumption is reduced.

- When the drying phase is over but before the operator can enter the booth, it is necessary to re-open the air gate and ensure that:
  1) The air inside the booth has been replaced with air from outside.
  2) The temperature in the cabin is lower than the pre-established value.
- The thermal profile needed is as follows.
  Out 1 = Heating output
  Out 2 = Event 1
  Out 3 = Programme running

Event 1 = in ON during ramp 1, stasis 1, ramp 2, and stasis 2.
Once the programme is running the door stays blocked.

The control function of the stasis allows us to end the programme (therefore allowing access to the operator) ONLY when the temperature in the booth has reached the programmed value (in the example Pr.S3). In addition, if a power down occurs during program execution, at the next power up, the instrument is able to continue the program execution starting from the segment in progress and, if the segment was a soak, the restart point will take care of the soak time already made (with an accuracy equal to 30 min.)

**ACCESSORIES**

**A01 – Programming key**
Makes it possible to:
- Memorize the configuration of an instrument to transfer it to other instruments
- Transfer a configuration to a PC
- Memorize a configuration recorded in a PC
- Let the instrument "converse" directly with a PC.

**WinTec – Supervisor**
- Data Acquisition
- Supervision
- Alarm management
- Recipe management
- Trend
- Reports.
**Controllers / Mini-programmers**

**Technical Features**

**Electrical Data**
- **Power Supply:** See the "How to Order"
- **Power Consumption:** Max 6 VA
- **Device Class:** Class II
- **Nominal Pulse Voltage:** 2.5 kV
- **Category of Overvoltage:** II
- **Isolation:** Reinforced between low voltage (input and output relay) and frontal parts. Reinforced between low voltage and very low voltage parts (input, static outputs)

**Thermocouple Input**
- **Type:** J, K, S, R, T programmable
- **Line Resistance:** 100 W with error <± 0.1% of the input range width
- **Unit of Measurement:** °C or °F programmable
- **Cold Junction:** Automatic compensation from 0 to +50 °C
- **Cold Junction Accuracy:** 0.1 °C/°C @ 25 °C after a warm-up (instrument switch-on) of 20 min
- **Calibration:** According to EN 60584-1

**Linear Signals Input**
- **Type:** 0/10-50 mV, 0/12-60 mV, 0/4-20 mA, 0/1-5 V, 0/2-10 V
- **Visualization:** Programmable from -1999 to 9999
- **Decimal Point:** Programmable
- **Burn-out:** (only for zero suppression signals) Burn-out signaling when the input signal is less than 5% of the input - Eld
- **Auxiliary Supply for 0/4-20 mA Transmitters:**
  - Type: Not isolated and not protected against short-circuit
  - Load: 10 V @ 20 mA
- **Input Impedance:**
  - 51 W for mA input
  - >1 M W for mV and V inputs

**Digital Inputs**
- **Type:** For free-voltage contacts
- **Max Contact Resistance:** 10 W
- **Contact Load:** 10 V, 6 mA

**Outputs**
- **Function:** Programmable
- **Output Action:** Direct/reverse, programmable
- **Type:**
  - Relay Outputs
    - Contact: SPDT or SPST-NO
    - Contact Load: See the "How to Order"
    - Relay Electric Life: 100000 Operations
  - Logic Tension to Drive a Solid State Relay
    - Isolation: Output NOT isolated as regards the very low voltage parts
    - Logic State 1: 12 V ± 20% @ 1 mA
    - 10 V ± 20% @ 20 mA
    - Logic State 0: <0.5 V

**Power Output Sensor**
- **Isolation:** Output not isolated and not protected by the short circuit
- **Tension:** 12 VDC
- **Current:** 20 mA Max

**Communication**
- **Type:** TTL Modbus and RS 485 (optional)
- **Isolation:** Functional isolation (50 V) with respect to the very low voltage parts
- **Protocol:** Modbus RTU
- **Electrical Levels:** According to EIA standards
- **Baud Rate:** From 1200 to 38000 baud
- **Parity:** None
- **Data Formed:** 8 bit + 1 start bit + 1 stop bit

**Enviromental Data**
- **Pollution Category:** 2
- **Installation Category:** II
- **Operating Temperature:** From 0 to 50 °C
- **Operating Humidity:** < 95 RH% without condensation
- **Storage Temperature:** -25 °C to 60 °C

**Functional Data**
- **Control:** Single Action PID, Double Action PID
- **On/Off, Neutral Zone On/Off**
- **Overall Accuracy:** ± (0.5 % span ± 1 digit @ 25 °C); Tc S: ± (1 % span ± 1 digit @ 25 °C)
- **Sampling Rate:** 130 ms
- **Display Updating Time:** 500 ms
- **Common-mode Rejection:** 120 dB to 50/60 Hz
- **Normal-mode Rejection:** 60 dB to 50/60 Hz
MECHANICAL DATA
Housing: UL 94 V0 self-extinguishing plastic
Mounting: on Omega DIN rail
Dimensions: 4 DIN module, 70 x 84 mm, depth 60 mm
Display: 4 Red Digit h 12 mm
Weight: 180 g approx.
Terminal block: 24 screw terminals (screw M3 for cables from 0.25 to 2.5 mm² or from AWG 22 to AWG 14)
Protection degree: IP 40 (screw terminal IP20) according to EN 60070-1 for indoor use.
